

Extremely Weak Power Equipment

An Extremely Weak Power Equipment (abbrev. EWPE) is defined as Non-License radio equipment, it does not need both any certification and operator license. A manufacturer would perform either measuring a field strength or confirmed tested data by third party laboratory that the measured results satisfy the maximum field strength stipulated in the Radio Law, they can sell the EWPE in Japan.

DSP Research has one of services that perform the test and issue the proof by ourselves. There are many types of equipment such as car alarms, keyless entries for mobile, wireless microphones and emergency alarm transmitters on the Japanese market.
